DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-2, and 7-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Isberg et al. (U.S. Patent No.: 6,246,891, hereinafter, "Isberg") in view of Martin et al. (U.S. Patent No.: 5,983,119, hereinafter, "Martin").

Regarding claims 1 and 7, Isberg teaches a wireless mobile station comprising (see figure 1):

a radio circuitry capable of up-converting a baseband signal to produce an output RF signal (see figure 1, radio circuitry 10, col.2, ln.10-12);

a removable antenna coupled to the radio circuitry for transmitting the output RF signal (see figure 1, removable antenna 2, radio circuitry 10, col.2, ln.15-20);

a power supply capable of supplying power to the radio circuitry (see figure 1, power 13, radio circuitry 10, col.2, ln.28-34); and

switching circuitry associated with the removable antenna capable of providing a first conduction path between the power supply and the radio circuitry (see figure 1, switch 12, removable antenna 2, power 13, col.2, ln.28-33), such that when the removable antenna is connected to the wireless mobile station, the first conduction path

Application/Control Number: 09/998,385

Art Unit: 2643

is closed and power is supplied to the radio circuitry from the power supply (see figure 1, when the antenna does not remove from the mobile, the power will supply to the radio circuitry and the phone is active) and when the antenna is disconnected from the wireless mobile station, the first conduction path is opened and the power is not supplied to the radio circuitry from the power supply (see figure 1, when the antenna remove from the mobile, the switch 12 is turn off, then there is no power supply to the radio circuitry and the phone is inactive, col.2, ln.6-38).

It should be noticed that Isberg fails to clearly teach the antenna couple to the transceiver. However, Martin teaches such features (see figure 2, antenna 120, transceiver 114, col.3, In.64-67) for a purpose of transmitting and receiving the RF signals.

Therefore, it would have been obvious to one of ordinary skill in the art at the invention was made to incorporate the use of the antenna couple to the transceiver, as taught by Martin, into view of Isberg in order to transmit and receive RF signals.

Regarding claims 2 and 8, Isberg further teaches the wireless mobile station wherein disconnection of the removable antenna from the wireless mobile station is highly visible to an observer (see figure 1, removable antenna 2, lid 3, col.2, ln.21-27).

Allowable Subject Matter

Claims 3-6, and 9-12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Application/Control Number: 09/998,385 Page 4

Conclusion

- 8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. In order to expedite the prosecution of this application, the applicants are also requested to consider the following references. Although Kaschke (U.S. Patent No. 5,898,933), Phillips (U.S. Patent No. 5,987,311), Takeyasu (U.S. Patent No. 5,497,506), and Horii (Pub. No.: U.S. 2002/0022504) are not applied into this Office Action; they are also called to Applicants attention. They may be used in future Office Action(s). These references are also concerned for supporting the system and method for enabling a keypad in response to antenna extention.
- 9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to **Tuan A. Pham** whose telephone number is (703) 305-4987. The examiner can normally be reached on Monday through Friday, 8:00 AM-5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mr. Curtis Kuntz can be reached on (703) 305-4708 and

IF PAPER HAS BEEN MISSED FROM THIS OFFICIAL ACTION PACKAGE, PLEASE CALL Customer Service at (703) 306-0377 FOR THE SUBSTITUTIONS OR COPIES.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks Washington, D.C. 20231

Or faxed to: (703) 872-9306

Art Unit: 2643

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive, Arlington VA, Sixth Floor (Receptionist, tel. No. 703-305-4700).

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have question on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
